Prescription vs.
Over-the-Counter
Hearing Aids:

Which One is *Right* for You?

The Benefits of **Prescription Hearing Aids**

Over-the-counter (OTC) hearing aids have recently become available to patients who suffer from mild to moderate perceived hearing loss. These devices might seem like a convenient alternative to prescription hearing aids, but their performance will likely fall short for many patients.

OTC hearing aids are designed to be a one-size-fits-all solution. But no two hearing problems are the same.

**Prescription hearing aids are different,
and deliver a host of transformative
benefits, including:**

- A comprehensive hearing evaluation
- A device that is tailored to meet each patient's unique individual needs.
- Custom fitting for maximum comfort.
- More precise amplification and other program settings.
- Peace of mind and an improved quality of life.

With decades of experience and Doctorate degrees in Audiology, Watson Clinic's Hearing Center team offers comprehensive evaluations that assess the nature and degree of each patient's hearing loss.

Additional services include evaluations and programming for cochlear implants and bone anchored devices, as well as hearing aid repairs and supplies. Over-the-counter hearing aids are also offered for patients who prefer to pursue this approach.

When a patient's condition requires more specialized medical attention, appointments can swiftly be arranged with one of Watson Clinic's board-certified Otolaryngologists (ENT).

The Watson Clinic Hearing Center
accepts appointments from
TWO CONVENIENT LOCATIONS:

Watson Clinic Highlands
2300 E. County Rd. 540A | Lakeland, FL

Watson Clinic Bella Vista Building
